

## Green Education and Sustainability at AGF

The Foundation is committed to facilitating access to high-quality education, including green education, to empower youth to engage in climate action and drive sustainable development.

To this end, the Foundation works with its partners towards a collective goal of addressing sustainability challenges through education and skill building.

### Greening Communities

The Foundation partnered with the UAE Ministry of Education to lead the Greening Communities pillar. This is one of the four pillars of UNESCO's Greening Education Partnership (GEP) which supports climate action through sustainable education. The Foundation's work on greening communities aims to:

- Promote environmental consciousness and empower youth with entrepreneurial skills.
- Raise environmental and climate-change-related awareness.
- Facilitate climate and sustainability education.
- Build youth's skills, knowledge, and capacity to contribute to climate action.
